

SNOWFLAKE DATA GOVERNANCE

ONE-DAY ADD-ON

24G29

OVERVIEW

This one-day Snowflake Data Governance add-on course provides participants with skills and practice to successfully use Snowflake data governance features to support an organization's data governance program. You will apply data governance techniques to ensure trustworthy data while making it available to different types of users. You will use features that identify and protect sensitive information and track the data to enable regulatory compliance. This course consists of lectures, demos, and labs.

ACQUIRED SKILLS

- Detect and classify sensitive data.
- Restrict access to sensitive data with policy-based row access control.
- Control the visibility of sensitive data with policy-based data masking.
- Determine who queried and updated data with access history.
- Analyze the downstream impact of planned changes.
- Identify the lineage of data objects.
- Manage and track the use of sensitive data.
- Extend data governance to data stored in your data lake.
- Govern data shared with multiple internal and external users.

WHO SHOULD ATTEND

- Data Stewards
- Snowflake Administrators
- Governance, Risk, and Compliance staff
- Data Security Administrators
- Privacy and Compliance Officers
- Data Engineers
- Data Architects
- Anyone involved with or interested in data governance in Snowflake

PREREQUISITES

- SQL skills and a database administration or database management background are required.
- Suggested completion of one of the following courses (or equivalent experience): “Administering Snowflake”, “Snowflake Data Engineer”, or “Snowflake Fundamentals”.

DELIVERY FORMAT

Instructor-led Public or Private classes are available.

TOPICS COVERED

Data Governance Overview

- Data Governance and Snowflake
- Data Governance Lab Exercise Overview

Identify Data Sensitivity

- Automatic Classification and Tagging
- Manual Object Tagging

Protect Your Data

- Data Governance Policies
- Context Functions in Data Governance Policy Conditions
- Row Access Policies
- Data Masking
- External Tokenization

Using Data Governance with Data Lakes

- Data Lakes and Data Governance

Sharing Sensitive Data

- Data Sharing Overview
- Recommendations and Considerations

Track and Analyze Your Data

- Access History (Reads)
- Access History (Writes)
- Access History and Column Lineage
- Audit Access History
- Impact Analysis

Policy Performance Considerations
